Beyond Duality: Truth, Falsehood, and the Emptiness of Being

Prepared by Andrei Preece, Berlin, 2025

Everything is true?
Everything is false?
Everything is both true and false?
Everything is neither non-true nor non-false?

Let us investigate all possible alternatives:

- **"Everything is true" – true**
  (Impossible, because in this case, there would be no falsehood, and without falsehood, there can be no truth either.)
- **"Everything is true" – false**
  (Then "everything is false" becomes true. However, if there is no truth, then falsehood itself cannot exist.)
- **"Everything (true + false)" – true**
  (Impossible, since truth and falsehood are mutually exclusive concepts, and the existence of such an alternative has not been established.)
- **"Everything (true + false)" – false**
  (Impossible, because if the coexistence of truth and falsehood has not been established, their nonexistence cannot be established either.)
- **"Everything is false" – false**
  (In that case, "everything is true" would be true. But as shown above, this assertion is untenable.)
- **"Everything is false" – true**
  (Impossible, because if there is no truth, there can be no falsehood either.)

The non-assertion of "everything" as true, as well as the non-assertion of "everything" as false, eliminates the logical contradictions that arise from all possible assertions.
Therefore, ASSERT NOTHING!

1	**|A|**	**true**
2	**not|A|**	not **true**
3	**|A| + not|A|**	**true** and not **true**
4	**neither not|A|,** **nor |not|not A|**	neither not **true**, nor not-not-**true**

Examples for point 4:

- *(There is no truth (and no "non-truth"); there is no "non-truth" (and no non-"non-truth").)*
- *(There is no existence (just as there is no absence of it); there is no existence of "non-existence" (just as there is no absence of it).)*
- *(There is no existence (just as there is no non-existence); there is no existence of "non-existence" (just as there is no non-existence of this "non-existence").)*

In these four constructs, all possible combinations of the interaction between concepts like |A| and not |A| are represented. When analyzed for both independent and dependent existence, neither proves viable. We continue emptying the concepts until even the basis for designation is gone, reaffirming the fact that EVERYTHING ("the existent" and "the non-existent") POINTS TO EMPTINESS!
Namaste
